

## **Instrumentation solutions for the machine-building industry: New brochure as a decision aid**

**Klingenberg, May 2017.**

**WIKA presents measurement solutions for machine building in a new brochure. This compact decision aid focuses on the core applications in the industry, from compressors through hydraulic and lubrication systems to pumps and systems.**

The application examples cover the wide product range for measuring pressure, temperature, level and flow. All suitable instruments can be matched clearly to the corresponding measurement tasks through the graphic illustration. Technical information on all products (including calibration instruments and accessories) can be found in the overview at the end of the booklet. The instrumentation for machine building is complemented through application-specific solutions which WIKA develops in cooperation with customers. The offering is expanded with services, such as the DAkkS certified calibration laboratory.

The new information brochure is available in a printed format, or it can be downloaded as an e-book from the website [www.wika.de](http://www.wika.de).

Number of characters: 976

Key words: Machine building brochure
